SECRET

This memorandum reports U.S. Navy aerial photography recently received in Washington. It is based on a scanning of the prints at the Office of Naval Intelligence before the material enters clerical processing. Its purpose is to advise CIA components as soon as possible of the existence of new aerial photographic cover as a guide for requirements on specific problems. Arrangements have been made with the Office of Naval Intelligence to obtain the original prints in cases of "crash" or high priority need. It is important that this privilege not be abused. For normal requests during the period of processing of the material, a minimum of 4 weeks time for the procurement of prints should be expected. The Photo Intelligence Division, ORR (Pm. 1237, H Bldg., [redacted] 25X1 invites consultation on specific requirements or further information.
